

COMPUTER CURSOR POINTING DEVICE WITH ELECTRIC STIMULATOR

ABSTRACT OF THE DISCLOSURE

A computer cursor pointing device with an electric stimulator is disclosed, including a casing, a first electrode which is mounted at the top surface of the casing, a second electrode which is also mounted at the top surface of the casing and is close to and insulated from the first electrode, and a stimulator circuit for generating a pair of stimulating signals to the first electrode and the second electrode respectively. When a user puts his hand on the computer cursor pointing device, the hollow of his palm rests on the first electrode and the second electrode. The stimulating signal drives the first electrode and the second electrode to electrically stimulate the user's palm.
